

MNET public key

All MNET host keys are stored in the table: `mdl_mnet_host` .

The id of the local MNET host key (your moodle) is stored in the config table in the `mnet_localhost_id` value.

You can use the following to get the public key and MNET information about your local moodle. Also a good idea to back this up if it is a site with an MNET integration (e.g. Mahara) as it will break once the public key changes.

```
select * from mdl_mnet_host where id = (  
    select value from mdl_config  
    where name = 'mnet_localhost_id'  
);
```
