Debug Values

The following is a list of the numeric values to set the value of the debug field (either through `$CFG->debug` in config.php or the debug value in the in the `mdl_config` table).

- 0 = `NONE`: Do not show any errors or warnings
- 5 = `MINIMAL`: Show only fatal errors
- 15 = `NORMAL`: Show errors, warnings and notices
- 6143 = `ALL`: Show all reasonable PHP debug messages
- 38911 = `DEVELOPER`: extra debug messages for developers

To change in the database, run the following SQL statement:

```
update mdl_config set value = {appropriate value} where name = 'debug';
```

This will usually also require a purge of the Moodle cache.
