PHP Session Save Path

You can find the `session.save_path` through php info or using the command line:

```
php -i | grep session
session.save_path => /var/lib/php/session
```

By default if there is no value, it will use a default e.g. `/var/lib/php/session` but this depends on the operating system.

Once you have that, you clear PHP sessions by going into that path and clearing out the relevant session files.
